

# Review of Education Standards 2022

The review of the Education Standards will consider developments within the profession and provide a realistic and comprehensive set of outcomes to be met by graduates on approved qualifications.

## We will do this by

- Asking stakeholders what they think and listening to their views.
- Ensuring our final proposals are future-proof and fit for purpose.
- Working closely with our education providers

The main areas of focus for section one of the Standards are:

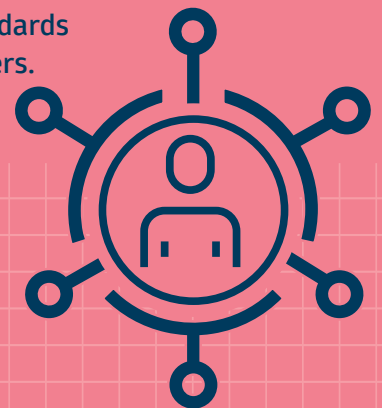

- Care of patients
- Professionalism
- Safety & quality
- Critical approaches
- Collaborative healthcare

There will be the theme of Equality, Diversity & Inclusion throughout the Standards.

## We want

- To have a central focus on patients and their care.
- To increase focus on multi-disciplinary learning with different professions working more closely together, ensuring that graduates are well placed to meet the opportunities to care for patients in different contexts.
- Outcome-based Standards for education providers.
